

## Vacancy for a **Staff Employee/Senior Staff Employee**

### **DMBR Microscopy Core facility**

#### Job description

The DMBR microscopy core has an opening for a new team member to provide specialized microscopy support to the scientists in the department. The core has several systems for advanced light microscopy including confocal, live cell and tissue imaging, multi-channel fluorescence and bright field imaging. We provide our users with a total approach: experimental design and optimization of their experiments, providing quality controlled reagents, imaging of their samples as well as image analysis and quantification.

#### Profile

- You have a background in biology/ molecular cell biology and a degree to a minimum of Industrial Engineer (or its equivalent by experience).
- You have thorough knowledge of basic microscopy and an interest in cell biology. Experience in advanced microscopy is an advantage, as is knowledge of computer image processing and software programs such as Velocity and Image J/FIJI. Experience working in a service facility will also be welcome.  
(Additional training in more advanced techniques will be provided as needed.)
- You are proficient in basic laboratory bench work such as the making of standard solutions and cell culture.
- You have a sense of responsibility and initiative.
- You have strong social and communication skills.
- You are willing to work as part of a service oriented team and also support the training programs run by the facility.
- Fluency in English is a requirement.

More information about the department, the VIB and the microscopy core facility can be found at: <http://www.dnbr.ugent.be>, <http://www.vib.eu> and <http://www.dnbr.ugent.be/ext/public/microscopy/index.html>

Candidates should Send applications in English with CV (including references) to:

Dr. Chris Guérin

Department for Molecular Biomedical Research (DMBR), VIB & University of Ghent, FSVM building, Technologiepark 927, B-9052 Gent (Zwijnaarde)
