2004

ACKNOWLEDGMENTS

The present volume is the outcome of two symposia, which were organized as the Second and Third Annual Meeting of *IOTa* (Interfacultaire Onderzoeksgroep Taalkunde), respectively. The first, held on 17 April 2002, addressed the relationship between language and various conceptions of the term ‘revolution’. The second took place on 4 April 2003 and tackled issues of language and time. With these meetings, we bring together linguists and other researchers working on the three campuses of the University of Antwerp, and beyond. The meetings deal primarily with topics of an explicitly interdisciplinary nature, as we would like to reach as many scholars as possible, both within the various domains of linguistics and in neighboring disciplines of the humanities and the social sciences.

The contributions contained in this volume constitute the totality of the talks that were given at both symposia. We wish to thank all of the presenters included.

The two symposia were financially backed by kind support from the Faculty of Arts (University of Antwerp, city campus), as well as from the Antwerp graduate program in linguistics.
